

Wavefunctions (radial), Probabilities, and Radial Probability Densities for One-electron Atoms

13.5 The radial wavefunctions of the first few states of hydrogenic atoms of atomic number Z . Note that the s orbitals have a nonzero and finite value at the nucleus. The horizontal scales are different in each case: orbitals with high principal quantum numbers are relatively distant from the nucleus.

Figure 10.6 Contour surfaces for constant $\psi^*\psi$ for one-electron atoms. The indicated signs are those of the wavefunctions. These signs are indicated because they will be of interest later when we discuss molecular orbitals. The probability density is, of course, always positive.
