## Clausius Inequality and $\Delta S$ for an Ideal Gas

Lecture 11  
Chemistry 163B  
Winter 2020

$q_{\text{rev}}$  , Clausius Inequality and calculating  
 $\Delta S$  for ideal gas P,V,T changes (HW#6)

Challenged Penmanship  
Notes

1

### *statements of the Second Law of Thermodynamics*

---

1. Macroscopic properties of an isolated system eventually assume constant values (e.g. pressure in two bulbs of gas becomes constant; two block of metal reach same T) [*Andrews. p37*]
2. It is impossible to construct a device that operates in cycles and that converts heat into work without producing some other change in the surroundings. *Kelvin's Statement* [*Raff p 157*]; *Carnot Cycle*
3. It is impossible to have a natural process which produces no other effect than absorption of heat from a colder body and discharge of heat to a warmer body. *Clausius's Statement, refrigerator*
4. In the neighborhood of any prescribed initial state there are states which cannot be reached by any adiabatic process  
~ *Caratheodory's statement* [*Andrews p. 58*]

## Clausius Inequality and $\Delta S$ for an Ideal Gas

### four steps to exactitude

---

$$I. \quad \mathcal{E}_{\text{CARNOT}\{\text{ideal gas}\}} = \frac{-w_{\text{total}}}{q_U} = 1 - \frac{T_L}{T_U} = 1 + \frac{q_L}{q_U}$$

$$II. \quad \mathcal{E}_{\text{ANY REVERSIBLE 'TWO TEMPERATURE' MACHINE}} = \mathcal{E}_{\text{CARNOT}\{\text{ideal gas}\}}$$

or else violation of 2nd Law

$$III. \quad \oint_{\text{cycle}} \frac{dq_{\text{rev}}}{T} = 0$$

eqn 5.11(E & R)<sub>3rd</sub>; ??(E & R)<sub>4th</sub> demonstrated for ideal gas Carnot;  
**general proof for two temperature reversible cycle;**  
 see "a REALLY BIG RESULT" lecture 10 Slide 33  
 also (Dickerson p. 155; Raff p. 162-163)

$$IV. \quad \oint_{\text{cycle}} \frac{dq_{\text{rev}}}{T} = 0 \quad \text{for any reversible cyclic process}$$

figure 5.16 E & R<sub>4th</sub> (5.4 E & R<sub>3rd</sub>)  
 (Dickerson pp.156 - 159, Raff pp.163 - 164)

3

### Entropy

---

$$dS = \frac{dq_{\text{rev}}}{T} \quad \text{is an exact differential}$$

**S is a state function**

4

# Chemistry 163B Winter 2020 , Lecture 11

## Clausius Inequality and $\Delta S$ for an Ideal Gas

### goals of lecture 11

---

1. Relate  $\Delta S$  and  $q_{\text{irrev}}$
2. Calculate  $\Delta S$  for P,V, T changes of ideal gas (HW#6)
  - a. using REVERSIBLE path ( $q_{\text{rev}}$ ) **[even for irreversible processes]**
  - b. using partial derivatives of S with respect to P, V, T [a look ahead]

5

### entropy and heat for actual (irreversible processes): $q_{\text{irrev}}$

---

an *irreversible* (actual) **cyclic** engine  $\epsilon_{\text{irrev}}$  coupled with a Carnot heat pump of  $\epsilon_C$  **will not** violate 2<sup>nd</sup> Law if  $\epsilon_{\text{irrev}} < \epsilon_C$  (viz section; Lect10 S30)

$\Delta U_{\text{cyclic}}=0$   
 $-W_{\text{total}}=q_U+q_L$   
 for both rev  
 and irrev

**BUT** what about  $q_{\text{irrev}}$  with  $\epsilon_{\text{irrev}} < \epsilon_C$  ??

$$\epsilon_{\text{irrev}} = \left( \frac{-w_{\text{total}}}{q_U} \right)_{\text{irrev}} = \left( \frac{q_U + q_L}{q_U} \right)_{\text{irrev}} = 1 + \frac{(q_L)_{\text{irrev}}}{(q_U)_{\text{irrev}}} < 1 - \frac{T_L}{T_U} = \epsilon_{\text{reversible}}$$

$$\frac{(q_L)_{\text{irrev}}}{(q_U)_{\text{irrev}}} < -\frac{T_L}{T_U}$$

$$\Delta S_{\text{cyclic engine (reversible or irreversible)}} = \frac{(q_U)_{\text{rev}}}{T_U} + \frac{(q_L)_{\text{rev}}}{T_L} = 0$$

$$\frac{(q_L)_{\text{irrev}}}{T_L} + \frac{(q_U)_{\text{irrev}}}{T_U} < 0 = \Delta S_{\text{cyclic engine (reversible or irreversible)}}$$

$$\frac{\bar{d}q_{\text{rev}}}{T} = dS \quad \frac{\bar{d}q_{\text{irrev}}}{T} < dS \quad \frac{\bar{d}q}{T} \leq dS$$

6

# Chemistry 163B Winter 2020 , Lecture 11 Clausius Inequality and $\Delta S$ for an Ideal Gas

## *2<sup>nd</sup> Law of Thermodynamics in terms of entropy*

• **S is a STATE FUNCTION**

$$\bullet \Delta S = \int_{rev} \frac{\delta q_{rev}}{T} > \int_{irrev} \frac{\delta q_{irrev}}{T}$$

**E&R eqn 5.26<sub>4th</sub> (5.33)<sub>3rd</sub> Clausius inequality**

7

### Lecture 3:

#### *Pressure-Volume work reversible isothermal expansion; $P_{ext}=P_{int}$*

1mole  
300K  
10 atm  
 $V_1$

$$w = - \int_{V_{initial}}^{V_{final}} P_{ext} dV \quad P_{ext} = P_{int} = \frac{nRT}{V}$$

$$w = - \int_{V_{initial}}^{V_{final}} \frac{nRT}{V} dV = - nRT \int_{V_1}^{V_2} \frac{1}{V} dV = - nRT \ln \frac{V_2}{V_1}$$

1mole  
300K  
1 atm  
 $V_2$

$$V_2 = \frac{300K R (1\text{mol})}{1 \text{ atm}} \quad V_1 = \frac{300K R (1\text{mol})}{10 \text{ atm}}$$

$$w = - (300 \text{ K-mol}) R \ln \frac{10 \text{ atm}}{1 \text{ atm}}$$

$$w = -5743 \text{ J} = -5.743 \text{ kJ}$$

(more work done ON surroundings

$$q_{rev} = -w = +5.743 \text{ kJ}$$

by reversible than irreversible;  $w_{irrev} = -2.244 \text{ kJ}$ )

8

# Chemistry 163B Winter 2020 , Lecture 11

## Clausius Inequality and $\Delta S$ for an Ideal Gas

*EXAMPLE from early lectures: isothermal expansion*

$(P_1=10 \text{ atm}, T_1=300\text{K}, V_1) \rightarrow (P_2=1 \text{ atm}, T_2=300\text{K}, V_2)$   
 initial → final

same initial and final
 $\int \frac{\delta q}{T} = \frac{q}{T}$  for isothermal process  $\Delta S$

$P_{\text{ext}} = P_{\text{int}}$ ;  $q_{\text{rev}} = 5743 \text{ J}$   $\frac{q_{\text{rev}}}{T} = 19.14 \text{ J K}^{-1}$   $19.14 \text{ J K}^{-1}$

$P_{\text{ext}} = \text{const } 1 \text{ atm}$ ;  $q_{\text{irrev}} = 2244 \text{ J}$   $\frac{q_{\text{irrev}}}{T} = 7.48 \text{ J K}^{-1} < 19.14 \text{ J K}^{-1}$

$$\Delta S = \int_{\text{initial}}^{\text{final}} \frac{\delta q_{\text{rev}}}{T} \geq \int_{\text{initial}}^{\text{final}} \frac{\delta q}{T}$$

to calculate  $\Delta S$  must use **reversible** path initial  $\Rightarrow$  final

11

$\Delta S_{\text{universe}} \geq 0$

soon :

$$\Delta S_{\text{system}} + \Delta S_{\text{surroundings}} = \Delta S_{\text{universe}} \geq 0$$

**disorder increases**

12

# Chemistry 163B Winter 2020 , Lecture 11

## Clausius Inequality and $\Delta S$ for an Ideal Gas

### calculating entropy (see summary on review handout) $\Rightarrow$

- Thermal properties of entropy and entropy calculations
    - $dS = \frac{\delta q_{rev}}{T}$ ;  $\Delta S = \int \frac{\delta q_{rev}}{T}$ ;  $\oint \frac{\delta q_{rev}}{T} = 0$
    - $\Delta S \geq \int \frac{\delta q}{T}$ ;  $0 \geq \oint \frac{\delta q}{T}$ ; (= for reversible process; > for spontaneous ['real'] process)
    - $\Delta S_{total\ universe} = \Delta S_{system} + \Delta S_{surroundings} \geq 0$
- S is a state function; dS is an exact differential  
 Dependence of S on

  - T:  $\left(\frac{\partial \bar{S}}{\partial T}\right)_V = \frac{\bar{C}_V}{T}$ ;  $\left(\frac{\partial \bar{S}}{\partial T}\right)_P = \frac{\bar{C}_P}{T}$
  - P:  $\left(\frac{\partial \bar{S}}{\partial P}\right)_T = -\left(\frac{\partial \bar{V}}{\partial T}\right)_P$
  - V:  $\left(\frac{\partial \bar{S}}{\partial \bar{V}}\right)_T = \left(\frac{\partial P}{\partial T}\right)_T$
- Phase:  $\Delta S = \frac{\Delta H_{equilibrium\ phase\ change}}{T_{equilibrium\ phase\ change}}$
  - Calculation of entropy changes for changes in P, V, T, phase
  - Third Law and calculations using Third Law Entropies:  $\bar{S}^\circ(T)$
  - $\Delta S^\circ_{mix}(T) = \sum_i \nu_i \bar{S}_i^\circ(T)$
  - Entropy of mixing:  $\Delta S = -n_{total} R \sum_i X_i \ln X_i$  where  $X_i = \frac{n_i}{n_{total}}$

13

look ahead -  $\Delta S$  for changes in T, V; (always  $\Delta S = \int_{initial}^{final} \frac{\delta q_{rev}}{T}$ )

also:

$S(T, V)$ :

$$dS = \left(\frac{\partial S}{\partial T}\right)_V dT + \left(\frac{\partial S}{\partial V}\right)_T dV$$

coming very soon

$$\left(\frac{\partial S}{\partial T}\right)_V = \frac{n\bar{C}_V}{T} \quad \left(\frac{\partial S}{\partial V}\right)_T = \left(\frac{\partial P}{\partial T}\right)_V$$

so:  $dS = \frac{n\bar{C}_V}{T} dT + \left(\frac{\partial P}{\partial T}\right)_V dV$  always (no  $w_{other}$ , closed system)

ideal gas

$$dS = \frac{n\bar{C}_V}{T} dT + \frac{nR}{V} dV \quad \Delta S = \int_{rev\ const\ V\ path} \frac{n\bar{C}_V}{T} dT + \int_{rev\ const\ T\ path} \frac{nR}{V} dV$$

$$\Delta S = n\bar{C}_V \ln\left(\frac{T_{final}}{T_{initial}}\right) + nR \ln\left(\frac{V_{final}}{V_{initial}}\right) \quad \text{E\&R eqn 5.14}_{4th} \text{ (5.18)}_{3rd}$$

## Clausius Inequality and $\Delta S$ for an Ideal Gas

*look ahead-  $\Delta S$  for changes in  $T, P$ ; (always  $\Delta S = \int_{initial}^{final} \frac{dq_{rev}}{T}$ )*

---

**also:**

$S(T, P):$

$$dS = \left(\frac{\partial S}{\partial T}\right)_P dT + \left(\frac{\partial S}{\partial P}\right)_T dP$$

— coming very soon —

$$\left(\frac{\partial S}{\partial T}\right)_P = \frac{n\bar{C}_P}{T} \quad \left(\frac{\partial S}{\partial P}\right)_T = -\left(\frac{\partial V}{\partial T}\right)_P$$

**so:**  $dS = \frac{n\bar{C}_P}{T} dT - \left(\frac{\partial V}{\partial T}\right)_P dP$  always (no  $w_{other}$ , closed system)

---

*ideal gas*

$$dS = \frac{n\bar{C}_P}{T} dT - \frac{nR}{P} dP \quad \Delta S = \int_{rev\ const\ P\ path} \frac{n\bar{C}_P}{T} dT - \int_{rev\ const\ T\ path} \frac{nR}{P} dP$$

$$\Delta S = n\bar{C}_P \ln\left(\frac{T_{final}}{T_{initial}}\right) - nR \ln\left(\frac{P_{final}}{P_{initial}}\right) \quad \text{E\&R eqn 5.15}_{4th} \text{ (5.19)}_{3rd}$$
